

# ABC of CHEMISTRY

Pearls Of Raw Nerdism

 Activation energy	 Benzene	 Covalent	 Double beta decay
 Equilibrium	 Fusion	 Gibbs free energy	 Half life
 Isotope	 Jones oxidation	 Ketone	 Lanthanides
 Molecule	 Nucleus	 Organic	 Ph
 Quark	 Reaction	 Spectral lines	 Triple bond
 UN Number	 Valency	 Woodward Hoffmann rules	 X-Ray diffraction
	 Yttrium	 Zwitterion	

Induction Day  
24<sup>th</sup> June 2019

# Do register

Please make sure that you have written your school email address on the register so that we can easily contact you.

# CHEMISTRY

## SUITABILITY

- APS 5.2
- Grade 6 in GCSE Sciences. If more than one Science at least two must be at a grade 6 (one must be Chemistry).
- Grade 6 in GCSE Maths (discussion with department if a grade 5 is achieved)
- Pass the entry exam.

# REALITY

- **A LEVEL CHEMISTRY IS TOUGH.** Every year we have students who find the transition difficult/impossible. In recent years students failed year 12 because of failing year 12 Chemistry. They then have to start year 12 again with new option choices.
- **What ever the topic, activity, or task you are set you will have to give your FULL commitment**

However, if you decide to choose **CHEMISTRY** and succeed, it will open doors for you.

**-GATEWAY SUBJECT.**

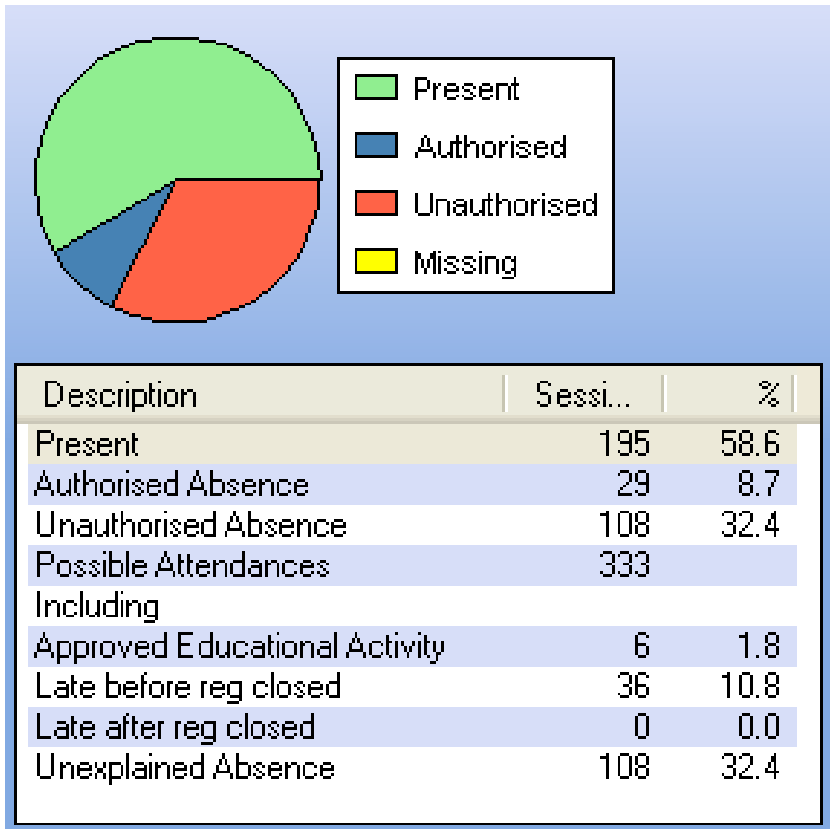

**(Don't forget to use the new 'Informed choices' tools to work out what you need for certain courses..)**

<https://www.informedchoices.ac.uk/degrees>

# EXPECTATIONS- ATTENDANCE

## SIMPLE RULE

- If you do not attend all of your lessons you will fail.
- If your attendance drops below 80% you will also probably fail!!!
- If you are ill you must catch up.

# **EXPECTATIONS- DEADLINES**

**IT IS NOT ACCEPTABLE TO MISS A DEADLINE**

**It benefits no one to be forever chasing bits of paper.  
Expect one chance, and that's it.**

# EXPECTATIONS- **RECORD KEEPING**

- You will need to keep your study notes and work in a folder in an organised manner.
- Every month or so you will be expected to hand the folder in for marking and evaluation.
- The monitoring of this will be increased next year, be prepared!

# EXPECTATIONS- **RECORD KEEPING**

- You will also need to buy a hardback lab log to write your experiments in.
- You have to complete and write up a minimum of 12 experiments over the two years.
- If your lab book is assessed as up to standard you will also be accredited with the experimental award on your final certificate.

# EXPECTATIONS- TEXTBOOKS

We strongly advise you to purchase the recommended book(s).

[https://www.amazon.co.uk/  
New--Level-Chemistry-AQA-  
Student/dp/1782943218/ref  
=sr\\_1\\_3?s=books&ie=UTF8&  
qid=1467284369&sr=1-  
3&keywords=aqa+chemistry  
+as+year+1](https://www.amazon.co.uk/New--Level-Chemistry-AQA-Student/dp/1782943218/ref=sr_1_3?s=books&ie=UTF8&qid=1467284369&sr=1-3&keywords=aqa+chemistry+as+year+1)

# EXPECTATIONS- SAFETY EXPECTATIONS

**HAIR TO  
BE TIED  
BACK.**

**BANNED.**

**Shorts, tops that do not cover shoulders, and open toed shoes...Mr Hardy has a thing against crow toes!**

# EXAMS

- You are the 5<sup>th</sup> cohort doing the new course.
- The results of the year 12 exam will not count towards your A level grade, but you will need to pass it!
- You will sit three papers on the whole two years of the course in year 13 to give you your grade.
- Paper three will be your practical assessment and will ask you questions on the practicals recorded in your lab records books.
- There are various assessment points (AP) throughout the course, based on the topics recently studied. It is expected that you will revise for these and the data will be collected and shared. Less than 40% on any of these assessments is considered “of concern”. This data is used to inform us for predicts, but also used as evidence of progress.

**Your best friend 😊**

# Chemistry induction test

First lesson in September. We have not finalised the test but we would expect you to know the following as a minimum:

- **4.1 Atomic Structure and the periodic table:**
  - subatomic particles, electronic structure, noble gases, halogens, alkali metals
- **4.2 Bonding, structure and the properties of matter :**
  - bonding x3, properties of small molecules/alloys/ionic/covalent compounds
- **4.3 Quantitative chemistry:**
  - balancing equations, Mr, moles, amount of substances in equations, limiting reactions
- **4.4 Chemical changes:**
  - reactivity series, metal extraction, salts, electrolysis, metal+acid rxns,
- **4.5 Energy changes:**
  - exothermic and endothermic reactions, reaction profiles
- **4.6 The rate and extent of chemical change:**
  - calculating rate, factors, reversibility/equilibrium
- **4.7 Organic chemistry :**
  - crude oil, hydrocarbons , alkanes, fractional distillation, cracking
- **4.8 Chemical analysis:**
  - chromatography, gas tests,
- **4.9 Chemistry of the atmosphere:**
  - atmosphere composition, atmosphere evolution, climate change, pollutants
- **4.10 Using resources:**
  - sustainable development, potable water, waste water treatment

Prep sessions:

'Head Start to A-Level Chemistry' - GCP

'Essential Maths Skills for A-Level Chemistry' - GCP

Recommended textbooks:

'A-Level Year 1 & AS Chemistry', Exam Board AQA- CGP

'A-Level Year 2 Chemistry', Exam Board AQA- CGP

Students can use the following link to access the (new) specification, required practical handbook and past papers.

<http://www.aqa.org.uk/subjects/science/as-and-a-level/chemistry-7404-7405>

List of good A-Level Chemistry websites: (with the caveat that I cannot check every web page that appears on these websites)

<http://www.chemguide.co.uk>

<http://www.s-cool.co.uk/a-level/chemistry>

<http://www.a-levelchemistry.co.uk>

<http://www.physicsandmathstutor.com/chemistry-revision/a-level-aqa/>

[http://www.rsc.org/learn-chemistry/wiki/A-Level\\_Chemistry\\_Revision](http://www.rsc.org/learn-chemistry/wiki/A-Level_Chemistry_Revision)

<http://www.docbrown.info/page13/page13.htm>

**Best of luck for your exam results and enjoy your summer.**

# TODAY

You are going to need to demonstrate your lab skills to separate water from ink...

- Wear goggles at all times
- Demonstrate safe and controlled use of the Bunsen burner.

**Revision for  
induction, incl.  
quantitative  
chemistry HT**

## PAPER 1

## PAPER 2

# GCSE Chemistry

4.1 Atomic Structure and the periodic table

4.2 Bonding, structure and the properties of matter

4.6 The rate and extent of chemical change

4.7 Organic chemistry

4.8 Chemical analysis

4.10 Using resources

4.3 Quantitative chemistry

4.4 Chemical changes

4.9 Chemistry of the atmosphere

4.5 Energy changes

# LESSON

# LINK TO SPECIFICATION

Conservation of mass, balanced chemical equations & Mr

4.3.1.1 Conservation of mass and balanced chemical equations

Mass changes when gases are in reactions & chemical measurements

4.3.1.2 Relative formula mass

4.3.1.3 Mass changes when a reactant or product is a gas

4.3.1.4 Chemical measurements

Moles (HT ONLY)

4.3.2.1 Moles (HT ONLY)

Amounts of substances in equations (HT ONLY)

4.3.2.2 Amounts of substances in equations (HT ONLY)

Using moles to balance equations (HT ONLY)

4.3.2.3 Using moles to balance equations (HT ONLY)

Limiting reactions (HT ONLY) & Concentration of solutions

4.3.2.4 Limiting reactions (HT ONLY)

4.3.2.5 Concentration of solutions

**HAND-OUT-  
double sided**

## CHEMICAL CALCULATIONS

Balance the equations below:

- \_\_\_ N<sub>2</sub> + \_\_\_ H<sub>2</sub> → \_\_\_ NH<sub>3</sub>
- \_\_\_ KClO<sub>3</sub> → \_\_\_ KCl + \_\_\_ O<sub>2</sub>
- \_\_\_ NaCl + \_\_\_ F<sub>2</sub> → \_\_\_ NaF + \_\_\_ Cl<sub>2</sub>
- \_\_\_ H<sub>2</sub> + \_\_\_ O<sub>2</sub> → \_\_\_ H<sub>2</sub>O

Work out the Mr for the following compounds:

- CaO
- CO<sub>2</sub>
- NH<sub>3</sub>
- MgCl<sub>2</sub>
- Fe<sub>2</sub>O<sub>3</sub>
- Ca(OH)<sub>2</sub>
- Al(NO<sub>3</sub>)<sub>3</sub>

	No. of moles = $\frac{\text{Mass}}{M_r}$	
H <sub>2</sub> SO <sub>4</sub>	98	The mass of 0.5 moles
Zn(CN) <sub>2</sub>	117	The number of moles in 11.7g
Al <sub>2</sub> O <sub>3</sub>	102	The number of moles in 122.4g
CaCl <sub>2</sub>	111	The mass of 0.4 moles
NH <sub>4</sub> NO <sub>3</sub>	80	The mass of 0.75 moles

4Li + O<sub>2</sub> → 2Li<sub>2</sub>O      How much Li<sub>2</sub>O can be made from 30g of Li? (3)

2C<sub>2</sub>H<sub>6</sub> + 7O<sub>2</sub> → 4CO<sub>2</sub> + 6H<sub>2</sub>O      How much CO<sub>2</sub> can be made from 6g of C<sub>2</sub>H<sub>6</sub>? (3)

CaCO<sub>3</sub> + 2HNO<sub>3</sub> → Ca(NO<sub>3</sub>)<sub>2</sub> + CO<sub>2</sub> + H<sub>2</sub>O      How much CaCO<sub>3</sub> is needed to make 18g of Ca(NO<sub>3</sub>)<sub>2</sub>? (3)

Use the following masses of reactants and products to write balanced symbol equations.

1) 4.40 g of propane (C<sub>3</sub>H<sub>8</sub>) reacts with 16.0 g of oxygen to produce 13.2 g of carbon dioxide and 7.20 g of water.

2) 79.2 g of C<sub>14</sub>H<sub>30</sub> is cracked to produce 40.0 g of C<sub>7</sub>H<sub>16</sub>, 17.6 g of C<sub>3</sub>H<sub>8</sub> and 22.4 g of C<sub>2</sub>H<sub>4</sub>.

3) 21.30 g of chlorine reacts with 24.00 g of sodium hydroxide to produce 29.25 g of sodium chloride. There are two possible chemical reactions that can happen:

**Problem #1:** For the combustion of sucrose:

there are 10.0 g of sucrose and 10.0 g of oxygen reacting. Which is the limiting reagent?

**Problem #2:** Calculate the number of NaBr formula units formed when 50 NBr<sub>3</sub> molecules and 57 NaOH formula units react?

**Problem #3:** Aluminum reacts with chlorine gas to form aluminum chloride via the following reaction:

How many grams of aluminum chloride could be produced from 34.0 g of aluminum and 39.0 g of chlorine gas?

1. What would be the concentration of...?

- 73 g of HCl in 1 dm<sup>3</sup>
- 159.5 g of CuSO<sub>4</sub> in 0.5 dm<sup>3</sup>
- 42.5 g of NaNO<sub>3</sub> in 0.5 dm<sup>3</sup>
- 5.6 g of KOH in 100 cm<sup>3</sup>

2. How much water would you need to add to...?

- 2 moles to get a concentration of 1 mol/dm<sup>3</sup>
- 0.5 moles to get a concentration of 0.5 mol/dm<sup>3</sup>
- 0.75 moles to get a concentration of 2 mol/dm<sup>3</sup>
- 0.1 moles to get a concentration of 1 mol/dm<sup>3</sup>

3. How much water would you need to add to...?

- 20 g of NaOH to get a concentration of 1 mol/dm<sup>3</sup>
- 14.9 g of KCl to get a concentration of 0.5 mol/dm<sup>3</sup>
- 15.95 g CuSO<sub>4</sub> to get a concentration of 2 mol/dm<sup>3</sup>
- 4.25g NaNO<sub>3</sub> to get a concentration of 1 mol/dm<sup>3</sup>

# CHEMICAL CALCULATIONS

Balance the equations below:

- 1)  $\text{___ N}_2 + \text{___ H}_2 \rightarrow \text{___ NH}_3$
- 2)  $\text{___ KClO}_3 \rightarrow \text{___ KCl} + \text{___ O}_2$
- 3)  $\text{___ NaCl} + \text{___ F}_2 \rightarrow \text{___ NaF} + \text{___ Cl}_2$
- 4)  $\text{___ H}_2 + \text{___ O}_2 \rightarrow \text{___ H}_2\text{O}$

Work out the Mr for the following compounds:

1. CaO
2. CO<sub>2</sub>
3. NH<sub>3</sub>
4. MgCl<sub>2</sub>
5. Fe<sub>2</sub>O<sub>3</sub>
6. Ca(OH)<sub>2</sub>
7. Al(NO<sub>3</sub>)<sub>3</sub>

	No. of moles = $\frac{\text{Mass}}{M_r}$	
H <sub>2</sub> SO <sub>4</sub>	98	The mass of 0.5moles
Zn(CN) <sub>2</sub>	117	The number of moles in 11.7g
Al <sub>2</sub> O <sub>3</sub>	102	The number of moles in 122.4g
CaCl <sub>2</sub>	111	The mass of 0.4moles
NH <sub>4</sub> NO <sub>3</sub>	80	The mass of 0.75moles

Use the following masses of reactants and products to write balanced symbol equations.

1) 4.40 g of propane (C<sub>3</sub>H<sub>8</sub>) reacts with 16.0 g of oxygen to produce 13.2 g of carbon dioxide and 7.20 g of water.

2) 79.2 g of C<sub>14</sub>H<sub>30</sub> is cracked to produce 40.0 g of C<sub>7</sub>H<sub>16</sub>, 16.8 g of C<sub>3</sub>H<sub>6</sub> and 22.4 g of C<sub>2</sub>H<sub>4</sub>.

3) 21.30 g of chlorine reacts with 24.00 g of sodium hydroxide to produce 29.25 g of sodium chloride. There are two possible chemical reactions that can happen:

Which is the correct reaction?

- Balancing equations
  - Mr
  - Moles
- Reacting masses
- Using moles to balance equations

How much Li<sub>2</sub>O can be made from 30g of Li? (3)

How much CO<sub>2</sub> can be made from 6g of C<sub>2</sub>H<sub>6</sub>? (3)

How much CaCO<sub>3</sub> is needed to make 18g of Ca(NO<sub>3</sub>)<sub>2</sub>? (3)

**Problem #1:** For the combustion of sucrose:

there are 10.0 g of sucrose and 10.0 g of oxygen reacting. Which is the limiting reagent?

**Problem #2:** Calculate the number of NaBr formula units formed when 50 NBr<sub>3</sub> molecules and 57 NaOH formula units react?

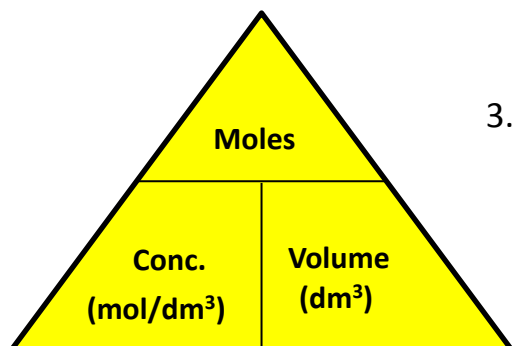

**Problem #3:** Aluminum reacts with chlorine gas to form aluminum chloride via the following reaction:
