

## Gaming Controls.

- **The Sony PSP, PS3, PS4 and PS Vita** have parental control settings that restrict the types of games that can be played and downloaded, as well as video content that can be viewed. Parental controls are usually found either on the home screen, or in the security settings.
- **Nintendo Wii U** has parental controls that can be set up to limit access to certain features which may not be suitable for the age of the child using the console. Parental controls can be found on the Wii U Menu.
- **Nintendo 3DS** allows you to limit access to certain features which may not be suitable for the age of the child using the console. Parental controls can be found in the Systems settings.
- **Nintendo Switch** has various parental control options so that parents can restrict or monitor their children's activities. The free Nintendo Switch Parental Controls app makes it easier to do so, even when you're not at home.
- **The Xbox 360** console lets you customise and manage access to games, films and television content. Parental controls allow you to restrict content such as games, films and TV shows, access to Xbox Live and how long a user can use the console on a daily or weekly basis. Parental controls can usually be found either on the home screen, or in the system or security settings.
- **The Xbox One** consoles require users to be signed in with an account. Consoles apply a range of default settings based on the details of the account holder. For example, for users aged 17 and younger, purchases are blocked. There are two methods of setting up parental controls on your Xbox One: either through the 'Family' feature, which allows users to group user accounts together on a console; or by signing in individually to the account that you may want to restrict.
- **Google Play devices** have parental controls to restrict the content you can download or purchase from Google Play on your device. By default, parental controls are turned off. To switch them on, open the Play Store app on your Android device, scroll down to the Parental Controls option, and access the settings option.
